

### Key features

This plugin allows to perform control actions in connection with the display.

Example: switch screen inputs or interact with external computer equipment.

### CHECK YOUR VIEW ENVIRONNEMENT

This principle offers a great deal of flexibility and makes it possible to adapt to all the problems of environmental control.

A block located in a sequence executes the actions associated with it via a macro-language that is very accessible to the user.

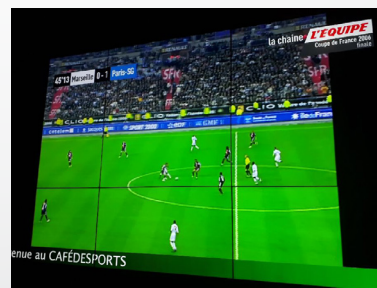

Exchanges over IP, USB, RS232 or directly on an I / O device.

Control blocks are inserted in a sequence like any other media

Inputs / outputs control  
TOR, USB, RS232

Example: TV sync  
on "panoramic"  
or walls of images
