

### Key features

With this module, it is not necessary to train all the actors to the use of the Visiosense SVS operating system. The team Communication only takes care of media content. The Easy Push module automatically **synchronizes** the publication on the screens.

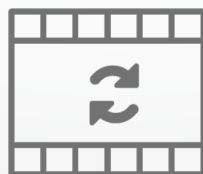

### SYNCHRONIZED PUBLICATION

The **Easypush Plugin** is an independent module of the Visiosense application that runs in the background, whose role is to detect any changes to a media list. At each detection of a change of a media file, the module publishes automatically this media for the precise area of the selected screen.

### Applications :

- This means that you can automatically manage multiple broadcast points in a centralized environment with multiple users and **without installing the SVS software.**
- It gives the ability to monitor the contents of a storage server or NAS disk remotely.
- It also allows the monitoring of a complete directory which it will mirror a zone or full screen display.

A configuration interface allows all the configuration flexibility Easypush module:

- Configuration for display times by media category
- Choice of target spaces (Central, Local, Red Wire)
- Choice of zones (1, 2, 3, 4) or full screen
