

Key features

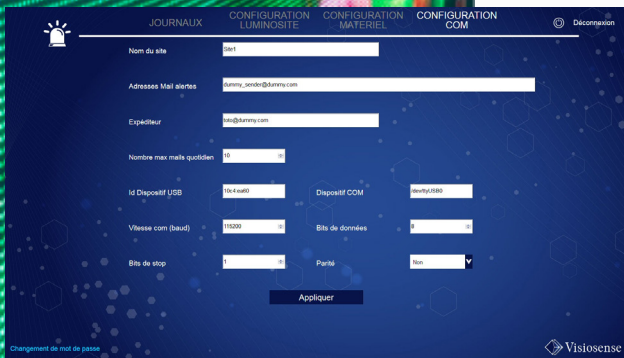

This plugin allows the control of the diffusion on the LED screens whose graphic resolution is specific.

COMMUNICATE WITH GIANT LED SCREENS

- Management of very low resolutions
- Cutting accuracy to the nearest pixel
- Ultra-fast loading mode suitable for sequences containing many very short media (a few seconds).
- Operating indicators

Compatible with Applications NOVA Mars and LED Studio

The Visiosense interface for NOVA STAR manages the control of brightness of the LED panel, ensures the filing and the raising of the alerts on the panel (console of supervision of the defects and sendings of mails).
