

Key features

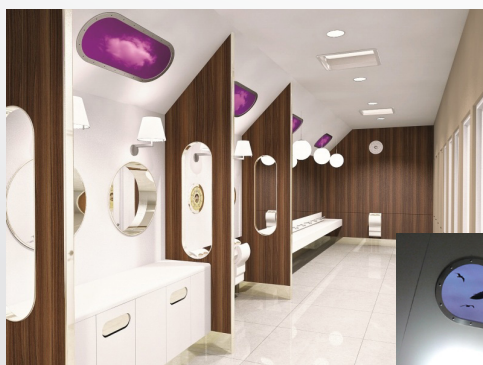

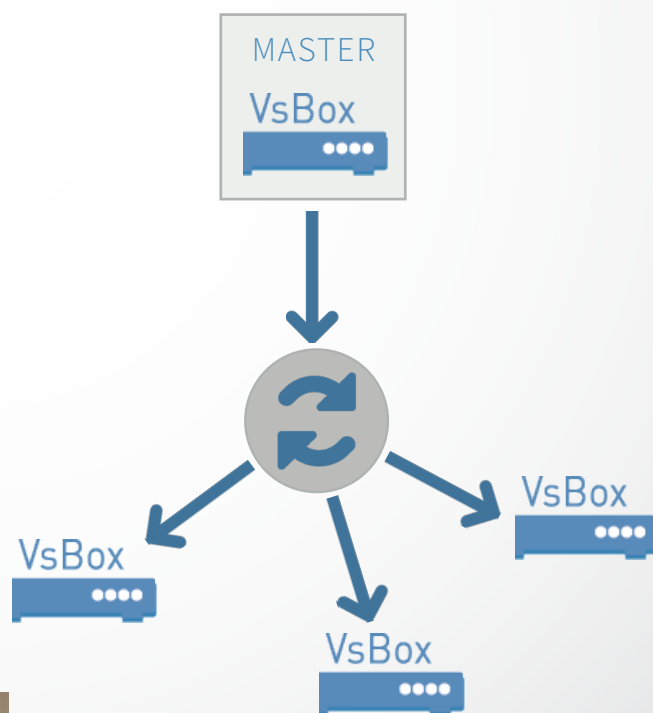

The "Panoramic" plugin allows the synchronization of several VsBox players via the network. Applications for screens aligned in panoramic mode with a very high quality image.

SYSTEM OPERATION

The VsBox Master performs upstream, cutting video files. All sources are stored in the Master before being distributed. Synchronization orders are sent over the network at regular intervals to ensure a perfect alignment of secondary sources. They each broadcast their media in real-time synchronous mode with a precision to the frame.

Example of Panoramic
4 screens 7680 X 1080 pixels

Example with separate screens
